

圣杯布局原理：

自己总结：核心代码，就是利用padding 让中间的居中，让后边两个盒子填补空位就行。

1. 首先设置初始，图和代码如下

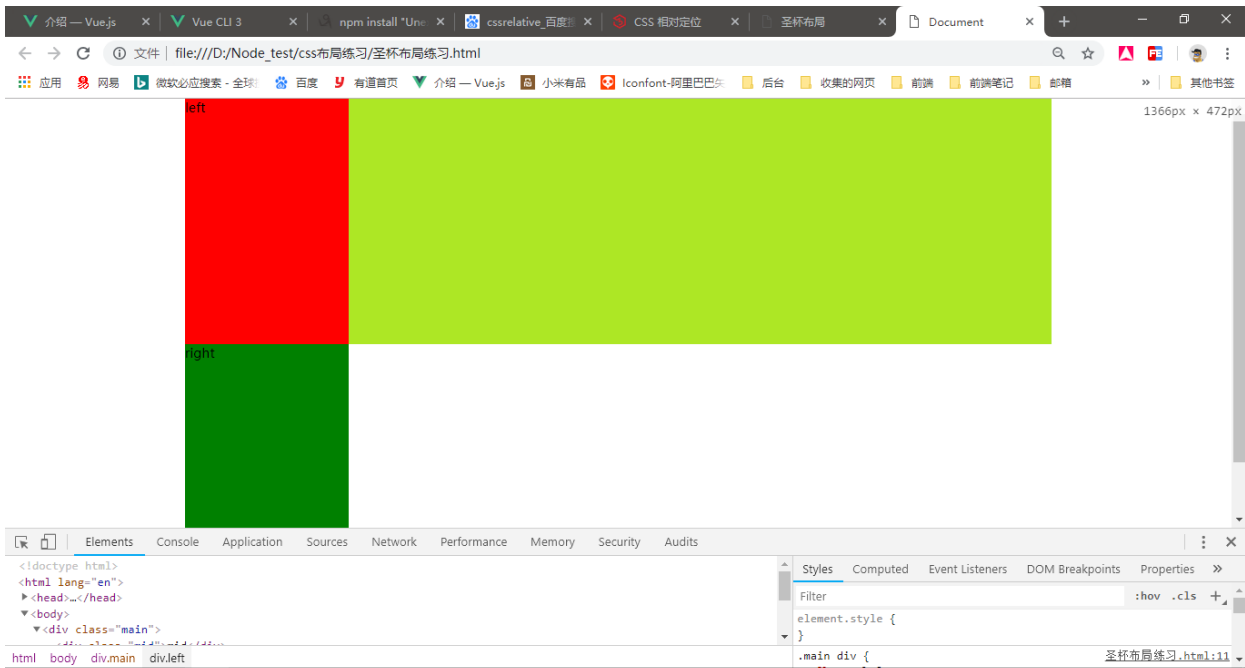

```

.main div{
  float: left;
  position: relative;
  height: 300px;
}
.left{
  width: 200px;
  background: red;
  /* margin-left: -100%;
  left: -220px; */
}
.right{
  width: 200px;
  background: green;
  /* margin-left: -200px; */
  /* right: -200px; */
}
.mid{
  width: 100%;
  background: rgb(173, 231, 37);
}
.main{
  padding: 0 220px;
}

```

2. margin-left: -100%: 让左边的色块移动到middle的前面;

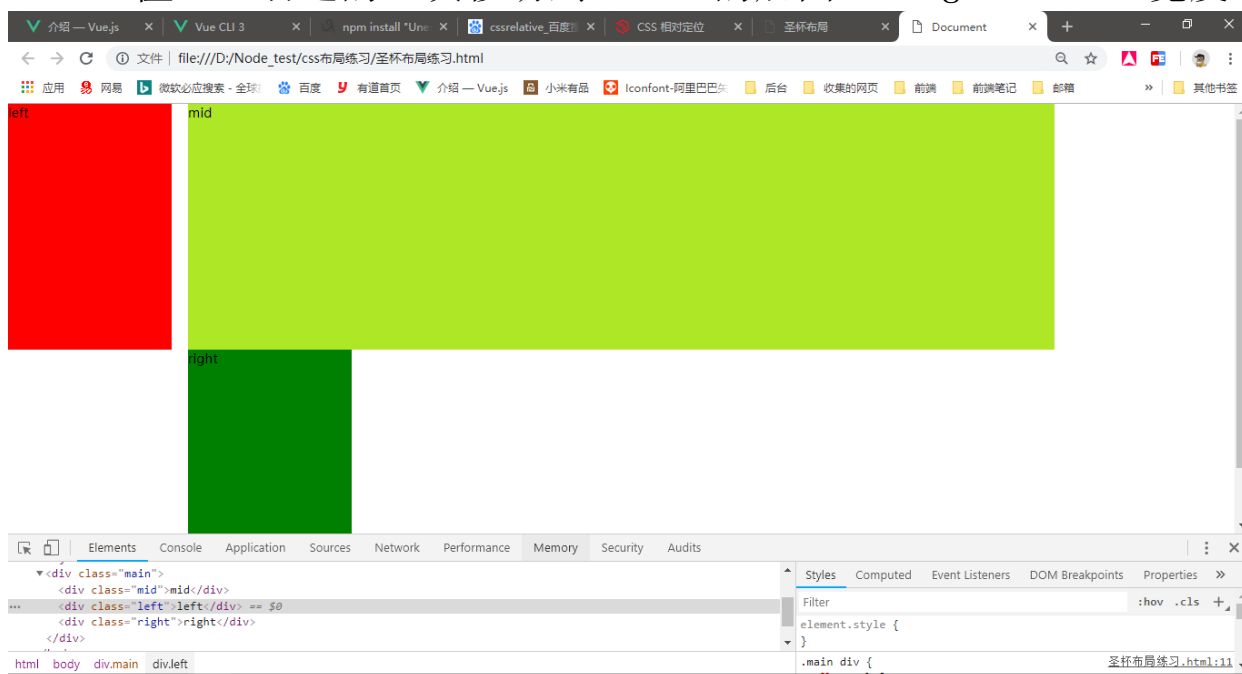

```

    height: 300px;
  }
  .left{
    width: 200px;
    background: red;
    margin-left: -100%;
    /* left: -220px; */
  }
  .right{
    width: 200px;
    background: green;
    /* margin-left: -200px; */
    /* right: -200px; */
  }

```

3. left值：让右边的色块移动到middle的后面 margin-left:-宽度

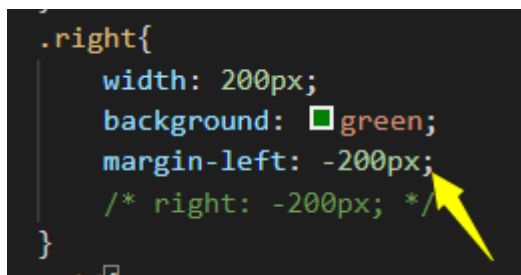

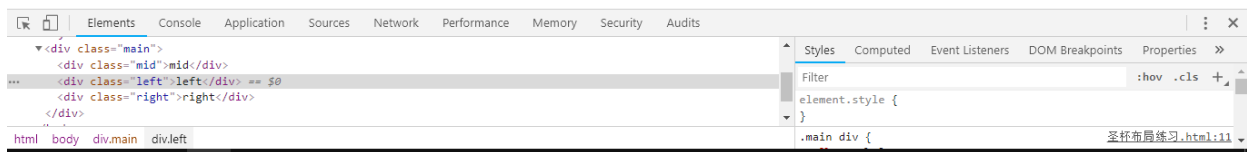

```

  .left{
    width: 200px;
    background: red;
    margin-left: -100%;
    left: -220px;
  }
  .right{

```

4.

或者写成:
